

An Introduction to the ANSI-AARST Large Building Standards

Brian Hanson
K-State Radon Programs

Engineering Extension: Radon Programs 

History of KS Radon Standards

Kansas became a **REGULATORY** state for radon July 1, 2011

- KDHE Division of Public Health Radiation Control Section
 - Adopted the original 1993 U.S. EPA radon standards by regulation
 - Measurement Standards
 - Indoor Radon and Radon Decay Product Measurement Device Protocols
 - Protocols for Radon and Radon Decay Product Measurements in Homes
 - Mitigation Standards
 - Radon Mitigation Standards

Engineering Extension: Radon Programs 

History of KS Radon Standards

- The U.S. EPA **RECOMMENDS** no longer using the now very dated standards
 - **RECOMMENDS** using the AARST-ANSI consensus standards

Engineering Extension: Radon Programs 

History of KS Radon Standards

Kansas became a **REGULATORY** state for radon July 1, 2011

- KDHE Division of Public Health Radiation Control Section
 - In 2021, began the regulatory process to replace the U.S. EPA radon standards with the ANSI-AARST Standards
 - Adoption process expected to be complete 1st Quarter 2023

Engineering Extension: Radon Programs 

History of KS Radon Standards

Kansas became a **REGULATORY** state for radon July 1, 2011

- KDHE Division of Public Health Radiation Control Section
 - ANSI-AARST Standards Categories
 - Single-Family Buildings
 - Large Buildings
 - Multi-Family
 - Schools and other Large Buildings
 - New Construction
 - Radon in Water
 - Quality Assurance

Engineering Extension: Radon Programs

I don't have 118 CRMS...

HOW DOES LARGE BUILDING MEASUREMENT DIFFER FROM SINGLE-FAMILY STRUCTURES?

Engineering Extension: Radon Programs

AARST Radon Measurement Protocols

- AARST Protocol for Radon Measurement in Multi-family Buildings
- Protocols for Conducting Measurements of Radon and Radon Decay Products in Schools and Large Buildings
- AARST-ANSI Standards

Table of Contents

1. Scope and Purpose	3. Test Locations
1.1 Scope	3.1 Ground-contact Locations
1.2 Applicability	3.2 Upper Floors
2. Before You Test	3.3 Locations Not to Test
2.1 Which Buildings?	3.4 Large Rooms or Open Areas
2.2 When to Test?	3.5 Multi-zone HVAC Systems
2.3 Test Devices	3.6 Inaccessible Ground-contact Locations
2.4 Who Should Conduct the Testing	3.7 Choosing a Room
2.5 Summary of Procedures	3.8 Choosing a Location Within a Room
2.6 Client Communications	
2.7 Assemble Building Information	
2.8 Test Device Quality Control	
2.9 Coordination Notifications

Measurements in Large Buildings

Primary differences between single-family and large building measurements

- When to test a large building
 - Buildings that **ARE** significantly occupied day and night
 - Can be tested **ANY TIME OF YEAR**
 - Residential-only or mixed use residential/other
 - Buildings that **ARE NOT** significantly occupied day and night
 - Measurements **SHALL** be conducted at a time representative of normal occupied conditions

Engineering Extension: Radon Programs
KANSAS STATE UNIVERSITY

Measurements in Large Buildings

Primary differences between single-family and large building measurements

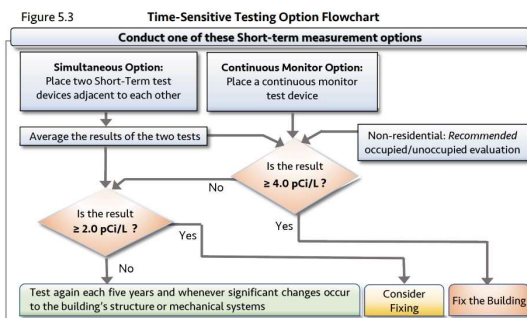

- Client communications
 - Not only between you and your client, but **ALL** occupants of the structure being measured
- Building investigation
 - Identification of **ALL** HVAC zones
 - Identification of **ALL** identified measurement locations (and devices needed for coverage)
 - **INCLUDING** QC devices

Engineering Extension: Radon Programs

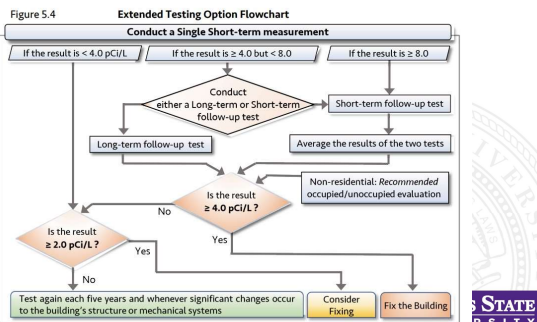

Testing Procedures & Options

Time-Sensitive Testing Option

Testing Procedures & Options

Extended Testing Option

Actions Based on Test Results

Action Level Guidance

Action Level Guidance

Countries worldwide have adopted *action levels* for radon exposures. The *action level* observed should comply with the guidance of the country, state or local jurisdiction of authority where the test is being conducted.

U.S. Action Level. The following *action level* descriptions reflect guidance from the United States Environmental Protection Agency (EPA):

- **4 pCi/L or greater** ($\geq 150 \text{ Bq/m}^3$)
Fix the building. The higher the radon concentration, the more quickly action should be taken to reduce the concentrations.
- **Below 4 pCi/L** ($< 150 \text{ Bq/m}^3$)
Consider fixing the building if test results indicate that radon concentrations are greater than half the *action level*, such as between 2 and 4 pCi/L (75 and 150 Bq/m³).

With observance that hazards from radon are virtually the same for radon concentrations that are near *action level* thresholds, it is noteworthy that the World Health Organization recommends limiting *long-term* exposures to less than 2.7 pCi/L (100 Bq/m³).

When measurement devices indicate concentrations lower than about 2.0 pCi/L (75 Bq/m³), test data should normally be interpreted as being lower than the test device can accurately measure.

Business Considerations

A non-comprehensive list of things to think about

- Device types (and numbers)
 - Purchase and storage of large numbers of devices
 - QC associated with those devices
- Project bid development
 - ‘Ask me anything BUT for time!’
 - Cost projections
 - Staffing, devices, report development
- Business practice changes
 - Insurance levels
 - Permanent/temporary staffing concerns

AARST Radon Mitigation Protocols

- AARST Radon Mitigation Standards for Multifamily Buildings
- AARST Radon Mitigation Standards for Schools and Large Buildings
- AARST-ANSI Standards
 - <https://standards.aarst.org/>

Table of Contents

1. Scope	5. System Design
2. Applicability	5.1 Health and Safety
2.1 Mandatory Conventions	5.2 Long-term Considerations
2.2 Prior Systems	5.3 Appropriate Systems
2.3 Adoption and Use	5.4 Nondestructive Investigation
3. Qualified Contractors	5.5 Diagnostic Investigation
3.1 Trained Professionals	5.6 Design Decisions
3.2 Contractors, Teams & Qualifications	6. ASD System Installation
3.3 Quality Management	6.1 ASD Suction Points
4. General Practices	6.2 ASD Piping
4.1 Assemble Building Information	6.3 ASD Pipe Sizing
4.2 Proposals	6.4 ASD Exhaust Discharge
4.3 Notification and Hazards	6.5 ASD Fan Installation
4.4 Jurisdictional Authorities	

Table of Contents

7. Sealing	8. For All Systems and Methods
7.1 Background & Accessibility	8.1 Long-Term OM&M Plan
7.2 Sealant Materials	8.2 System Monitors
7.3 Accessible Cracks	8.3 Electrical
7.4 Other Accessible Openings	8.4 Labeling
7.5 Sumps and Pits	8.5 Inspection for Compliance
7.6 Membranes Over Open Soil	8.6 Retention of Records
7.7 Sub-membrane Depressurization	9. Post-Mitigation
7.8 Drains	9.1 Functional Evaluation
7.9 Sealed Isolation Assemblies	9.2 Initial Radon Test After Mitigation

Table of Contents

10. Documentation & OMM	12. Non-ASD Systems & Methods
10.1 Essential Information	12.1 For All Non-ASD Methods
10.2 When Owner-Occupied	12.2 Sources of Air
10.3 Inadvertent Collateral Mitigation	12.3 Indoor Air Pressurization
10.4 When Not Owner-Occupied	12.4 Soil Air Pressurization
11. Health & Safety	12.5 Indoor Air Dilution
11.1 Mitigation Installers	12.6 Soil Air Dilution
11.2 Workers and Occupants	12.7 Controls for Variable Activation
	12.8 HVAC Repairs & Modifications
	12.9 Building Materials
	12.10 Water
	12.11 Source Removal
	12.12 Air Cleaning
	12.13 Passive Methods & Systems

Engineering Extension: Radon Programs **KANSAS STATE UNIVERSITY**

Mitigation in Large Buildings

Primary differences between single-family and large building mitigation activities

- Standards' scope
 - Addresses **WHOLE** building consideration
 - Apply when implemented to **PORTIONS** of a large building, or
 - Individual unit/dwelling of a large building
 - When building portions include
 - Non-residential purposes and/or
 - Elaborate HVAC systems
 - Refer to RMS-LB schools/large buildings

Engineering Extension: Radon Programs **KANSAS STATE UNIVERSITY**

Mitigation in Large Buildings

Primary differences between single-family and large building mitigation activities

- Building investigation
 - Collect **ALL** known radon measurement reports
 - ID any measurement data insufficiencies
 - Identification of **ALL** HVAC zones
 - Identification of **ALL** foundational zones

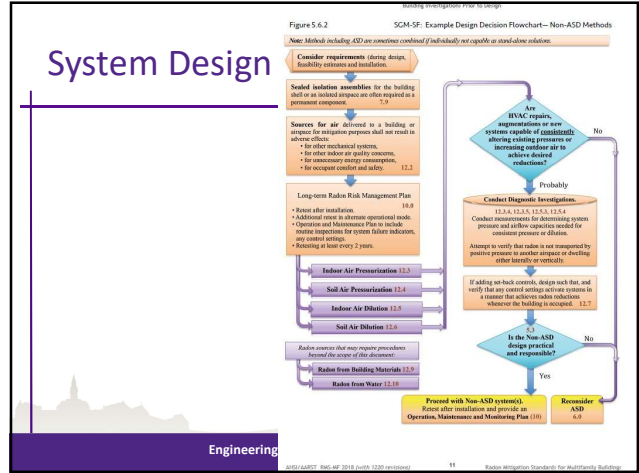

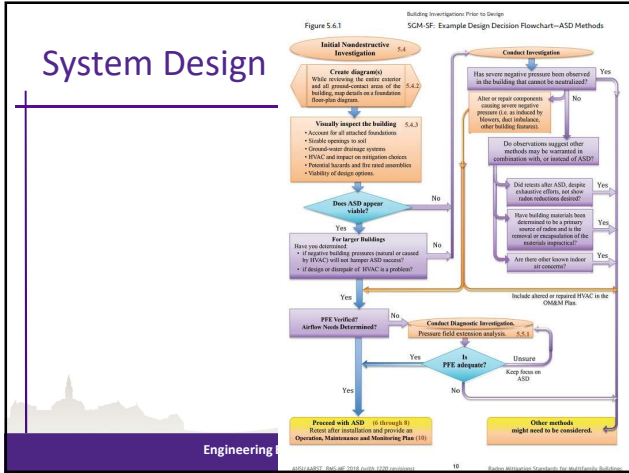

Engineering Extension: Radon Programs **KANSAS STATE UNIVERSITY**

Mitigation in Large Buildings

Primary differences between single-family and large building mitigation activities

- Proposal/bid issues
 - Provide the client a statement regarding extent of **ALL** building investigations needed to design an appropriate mitigation strategy/system
- Client communication
 - *Occupant Advisory: Common construction sealants used to prevent radon entry at foundations and other locations will normally emit vapors that contain modest amounts of certain chemicals generally referred to as volatile organic compounds. The emissions occur mostly during application, but also to a lesser extent as they dry to form an airtight bond. While these chemicals are commonly used, some sensitive individuals may experience discomfort or other health effects when exposed to such chemicals.
 - Symptoms that may indicate sensitivity to these vapors may include: nausea, headaches, dizziness, drowsiness and/or an allergic reaction. Special consideration should be made for the very young or elderly who cannot communicate symptoms experienced. Safety Data Sheets (SDS) are available upon request.
 - If symptoms are observed: Leave the area immediately to breathe fresh air. Avoid further exposure. If symptoms persist, get medical attention.
 - (See notice examples in Exhibits A-1 and A-3.)
 - The notification to clients regarding hazardous materials shall include a general description of the hazardous materials, symptoms that might indicate sensitivity to the materials, and actions to take if symptoms are observed.

Engineering Extension: Radon Programs **KANSAS STATE UNIVERSITY**

Documentation

Table 10.5 Part 1

Table 10.5 Operation, Maintenance and Monitoring (OM&M) Plan Requirements		
Documentation	Maintenance Inspections of Controls and Monitors	Frequency of Inspection
<p>Controls and Mechanical System Monitors</p> <p>Document Startup Details A description shall be provided for the fan monitors, control settings and other operating parameters that existed at the time successful mitigation was initially achieved. Note—The description should include explicit detail for comparison during inspections and repair, including: a) descriptions of equipment labeling and annotations for fan monitors, control settings and other operating parameters; b) exact locations of fan monitors, electronic telemetry/monitoring equipment, electrical disconnects and other components; c) instructions for equipment sufficient to interpret labels, annotations and the designed operating parameters for the equipment. When applicable, include manufacturer instructions; d) a list of appropriate actions for the client(s) to take if fan monitor devices or inspections indicate a system is not operating as designed; and e) documented measurements for balance of airflow in and airflow out of HVAC system(s) when a component of a mitigation system.</p>	<p>The following inspections shall be written into the OM&M plan as required actions: a) inspection of fan monitors, control settings and other operating parameters to ensure systems are operating as designed; b) investigation and correction of any conditions that are found to indicate component failure or inconsistencies with designed operating parameters; c) recording and maintenance of records that are to be assimilated into the overall building OM&M documentation; and d) the plan shall stipulate that a qualified professional should perform these inspections and if performed by in-house maintenance staff, such staff shall be trained in system operations.</p>	<p>The plan shall stipulate recommendations and any requirements for the frequency of inspections, as deemed by the contractor as appropriate to the situation. Note 1—it is recommended that the plan stipulate inspections be conducted at least quarterly of all fan monitors, controls, and as applicable, filters and vent openings. Note 2—The plan should recommend inspections subsequent to: a) system shutdown due to building power failure or emergency; and b) any catastrophic event that could damage system components.</p>

AS STATE UNIVERSITY

Documentation

Table 10.5 Part 2

Documentation	Mechanical Equipment Inspections	Frequency of Inspection
<p>Equipment Details and Instructions</p> <ol style="list-style-type: none"> Include manufacturer instructions and instructions specific to design configurations, as appropriate; Include exact locations of fans, electrical disconnects and other components; and Include a list of appropriate actions for the client(s) to take if the fan monitor warning device indicates system degradation or failure. <p>Include a list of potential repair items for ASD systems that should include:</p> <ol style="list-style-type: none"> fan monitor repair or replacement (e.g., reconnect or replace oil in U tube); electrical repair; fan or boot replacement; and sealing openings to soil or piping connections. <p>Monitoring Continued Effectiveness The plan shall include notice of applicable retesting guidance found in ANSI/JAIRST publication MAMF: Protocol for Conducting Measurements of Radon and Radon Decay Products in Multifamily Buildings.</p>	<p>The OM&M plan shall observe that mechanical equipment inspections should include all seals, straps, fasteners, electrical system (including switch operation), boots, performance indicators, labels, pipe condition, filters, inlet grills and fan operation. When HVAC is a component of the mitigation system(s), provide a list of inspection items that includes: i. HVAC airflow in and airflow out of the air handler; ii. functionality of HVAC filters; iii. room differential pressure test; iv. fresh-air damper settings; and v. verification for supply air into rooms of interest.</p>	<p>The plan shall stipulate that a detailed inspection of all components is to be conducted at least every 2 years by a qualified professional.</p>

Business Considerations

A non-comprehensive list of things to think about

- Project bid development
 - ‘Ask me anything BUT for time!’
 - Costs of bid production
 - Cost projections
 - Staffing, devices, report development
- Business practice changes
 - Insurance levels
 - Permanent/temporary staffing concerns

Cause, boy do I have answers...
